

YES, IT CAN!

**Hi-tech equipment. Making a difference.
Career growth. Teamwork.**

All of these phrases describe what could be YOUR career in mold building. Whether you're a high school senior, attending college or coming from a previous career, mold building provides opportunities for career growth and advancement in unexpected and exciting ways.

When pursuing a career in mold building, you'll have access to:

- Hi-tech, advanced machinery
- A team-oriented work environment
- Little-to-no college debt
- Career opportunities and competitive pay
- Financial support for education and training

IN HER WORDS:

"At the technical high school I attended, I learned the basics of manufacturing on a milling machine, a lathe and CNC programming. There are so many possibilities in this field...I started here cleaning off parts and now I'm on the floor making them."

IN MOLD BUILDING
BE FOR YOU?**

MAKE AN IMPACT

AS A MOLD BUILDER

In this trade, you aren't just building a mold - you're creating a tool that allows other manufacturers the ability to create steering wheels, medical devices and other every day items that positively impact consumers all over the world.

To read more about the benefits of a mold building career, see below.

CAREER ADVANCEMENT OPPORTUNITES

In mold building, you can pursue any path that appeals to you. As you advance further into the trade and complete apprenticeship, journeyman and other continuing education opportunities, your skill mastery and career direction will flourish alongside your earning potential.

MAKE A COMPETITIVE SALARY

On average, entry-level mold builders - after 4-5 years of apprenticeship - can make up to \$16 - \$21/hour (about half that of an experienced mold builder). Although this varies based on experience, geography and skill specialization, most entry-level mold builders make competitive pay, no matter their educational background.

HIGH-TECH, TEAM-ORIENTED ENVIRONMENT

Manufacturing plants are not dusty and dangerous. In fact, mold building facilities are high-tech, fast-paced environments that require advanced training and constant communication and teamwork between designers, machine operators, plant managers and others.
